

Field: Data Science
Name: DevIntel LLC
Location: Dhaka, Bangladesh
Name of Position: Analyst (1)

Brief Description of Organization:

DevIntel applies cutting edge predictive modeling and data science tools to help social programs improve impact and cost-effectiveness. Using data available inside and outside NGOs and governments, DevIntel helps predict future emergencies and identify high risk beneficiaries, so that targeted and preventive action can be taken. DevIntel is a startup of three people, but has started its first few projects with reputed partners like Johns Hopkins School of Public Health, DFID and BRAC.

Information Specific to the Internship:

Analyst

Qualifications:

This internship opportunity is open to both undergraduate and graduate students. A good candidate will be able to conduct exploratory data analysis and visualizations, think analytically for problem solving, create basic statistical models, and communicate model results to clients in plain English. Individuals with experience working in international development are preferred, but this preference may be waived for individuals with strong analytical backgrounds and modeling experience.

Primary Responsibilities:

The Analyst's primary responsibility will be to analyze client data and collection systems, and their needs and problems, to creatively craft modeling exercises that can be useful for future decision-making by the client organization.

Schedule:

Summer opportunity of up to 8 weeks in duration.

Stipend/Assistance:

DevIntel is able to provide assistance in arranging housing, local transportation, meals, language training, and cultural excursions. However, DevIntel is not able to provide a general stipend to finance the intern's stay.

To Apply:

Please send your resume/CV to Rubayat Khan at rubayat@devintel.org. Inquiries regarding logistical concerns (including travel, housing, and general lifestyle questions) may also be sent to Rubayat Khan.
